

Dear Shabana Mahmood (MP),

We are writing to you as we would like to notify you that we are currently investigating a terrible incident of fly tipping, as we believe it is affecting the community. Our environment is at risk so we would like you to take strict action against this.

From our secondary research, we have found out that there are many cases due to littering which can cause a loss to local tourism. It must be stopped as the environment is becoming unhygienic for children who play outside, and it is harmful to wildlife animals. Our project is about improving the littering and fly tipping around the area. This helps people to take pride in their local community. However, from our primary research we have found out that more people have agreed that littering and Fly-Tipping should be stopped and more should help clean the neighborhood instead of causing it. Residents are guilty of littering and therefore as well as starting a clean-up process, educating citizens on the impacts of littering on the environment is important.

The effect of littering can cause many impacts on society such as direct short-term public health issues (injuries, entanglement, and navigational hazards) and indirect, long-term impacts on quality of life (recreational opportunities, loss of aesthetic value and loss of non-use value). This needs to be stopped as hazardous objects can hurt anyone even if they are small.

I hope you considered this to make a change to society to help future generations. We look forward to your reply to us for your support to help us improve the environment.

Yours sincerely,

Mahia Begum, Muqaddas Zaheen, Grace and Ellen Broadbelt
